                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              284
                                                                                                                                                                                                                                                                                                                                                                                                                                                transport
                                                                                                                                                                                                                                                                                                                                                           The invention relates to human transporters and ion channels (TRICH) and the polynucleotides encoding them. The composition comprising TRICH or agonist of TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH or condition associated with coverexpression of TRICH respectively. The composition comprising Ab is useful for diagnosing a condition of disease associated with expression of TRICH in a subject, where the disorders include a transport capacition of disease associated with capacition, hyperspecial disorders associated with transport e.g. angina, hypertension, myocarditis, neurological disorders associated with transport e.g. Alzheimer's disease, Wilson's disease, schizophrenia, cataracts, infertility, hypersplycaemia, Grave's disease, schizophrenia, cataracts, infertility, hypersplycaemia, Grave's disease, solitre, addison's disease, Huntington's disease, dementia, multiple sclerosis, bacterial and viral meningitis. TRICH DNA is useful for generating a transcript image of a tissue or cell type, which represents the global pattern of gene expression by a particular tissue or cell type and for analysing the proteome of a tissue or cell type. TRICH DNA is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders

                                                                            ð
                                                                                                                                                                                                                                                                                                                                           The invention relates to human tandem of P domains in a weak inward
rectifying potassium channel polypeptides (TWIK-9) termed 56115 and
nucleic acid molecules encoding such polypeptides. Sequences of the
invention are useful for treating TWIK-9-associated or related disorders
c nucleic acid molecules encoding such polypeptides. Sequences of the
invention are useful for treating TWIK-9-associated or related disorders
c nucleic acid molecules encoding such polypeptides or related disorders
c e.g. Alzheimer's disease,
c e.g. Alzheimer's disorders
c depression, schizophrenia), learning or memory disorders (e.g.
c depression, schizophrenia), learning or memory disorders (e.g.
c arteriosclerosis, myocardial infarction), pain disorders (e.g.
c proliferation, growth, differentiation or migration disorders (e.g.
c proliferation, growth, differentiation or migration disorders (e.g.
c cancer) and disorders of tissues in which TWIK-9 protein is predominantly
c expressed. They are also useful in screening assays, detection assays
(e.g. chromosomal mapping, tissue typing, forensic biology), predictive
medicine (e.g., diagnostic assays, prognostic assays, monitoring clinical
trials and pharmacogenomics) and in methods of treatment (e.g.
therapeutic and prophylactic). TWIK-9 polynucleotides are used in gene
therapy. The present sequence is human TWIK-9 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ŋ

TWIK-8, IC47611, IC47615, HNWDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ICF nucleic acids and proteins may be used for preventing, diagnosing and treating ICF-related diseases. The sequences may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of ICF proteins or to supplement the activity of ICF proteins. The proteins may also be used as antigens in the production of ICF proteins. The proteins and in assays to identify modulators of ICF protein expression and activity. The antibodies against ICF proteins and in assays to identify modulators of ICF protein expression and activity. The antibodies may be used to regulate ICF protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of ICF proteins in samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple and leukaemia, Alzheimer's disease, Parkinson's disease, multiple sequence represents the human TWIK-9 protein of the invention. Note: The sequence data for this patent is also available in electronic format from used used as disease.

US-09-144-914-5

Sequence 5, Application US/09144914

Patent No. 6309855

GENERAL INFORMATION:
APPLICANT: Lesage, Florian
APPLICANT: Lazdunski, Michel
ATITLE OF INVENTION: AND THEIR USE, ESPECIALLY FOR THE SCREENING OF DRUGS
TITLE OF INVENTION NUMBER: US/09/144,914
CURRENT FILING DATE: 1998-09-01
BARLIER APPLICATION NUMBER: 60/095,234
BARLIER APPLICATION NUMBER: 60/095,234
BARLIER APPLICATION NUMBER: FR 96/01565
BARLIER APPLICATION NUMBER: 60/095,234
BARLIER FILING DATE: 1998-09-04
BARLIER PILING DATE: 1998-08-04

GENERAL INFORMATION:

APPLICANT: Lesage, Florian

APPLICANT: Lazdunski, Michel

FILE OF INVENTION: FAMILY OF MAMMALIAN POTASSIUM CHANNELS, THEIR CLONING

TITLE OF INVENTION: AND THEIR USE, ESPECIALLY FOR THE SCREENING OF DRUGS

FILE REFERENCE: 1201-CIP-DIV-2-00

CURRENT FILING DATE: 1298-09-01

PRIOR APPLICATION NUMBER: 09/144,914

PRIOR PILING DATE: 1996-01-15

PRIOR PLING DATE: 1996-01-15

PRIOR PILING DATE: 1996-02-08

NUMBER OF SEQ ID NOS: 24

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiaathmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP nucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisense, triplex-forming or ribodyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agentisc antibodies (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                      // HSPP

The present sequence is that of cDNA encoding human TASK1 (TWIK-related acid-sensitive potassium channel). The cDNA was isolated from a human kidney cDNA library using as probe a murine clone that had been identified from database searches using TWIK-1 and TREK-1 sequences.

TASK1 belongs to a new family of 2P domain potassium channels, also including TWIK-1 (see AAY79673) and novel TASK2 (see AAY79675). The TASK1 gene is located on chromosome 2p23. TASK1 is expressed in many different tissues, and at particularly high levels in pancreas and placenta. Host cells expressing TWIK-1 family members can be used to screen for substances that modulate the activity of members of the TWIK-1 family of potassium channels. The drugs identified may be useful in the treatment of diseases of the heart or of the nervous system, such as epilepsy, arrhythmia, vascular diseases, neurodegenerative diseases, kidney, liver or pancreas diseases associated with anomalies of hormone secretion, and muscle diseases. Nucleic acid sequences can be used for diseases, in gene therapy and in the recombinant production protein

patients own production of ICF proteins. The proteins may also be used as antigens in the production of antibodies against ICF proteins and in assays to identify modulators of ICF protein expression and activity. The anti-ICF protein antibodies, agonists and antagonists may be used to regulate ICF protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of ICF proteins in samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple sclerosis, epilepsy, hepatic disorders and cardiovascular disorders. This sequence represents human DNA used in the scope of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at segdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                614
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        734
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     554
                                                                                                                                                                                                                                                                                                                         194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            434

                                           The invention relates to a mutant potassium ion channel protein, having four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a mouse cDNA encoding a 2P channel protein
                                                                                                                                                                                                                                                                                                                         40

The invention relates to TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611,

IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ion channel
family (ICF) nucleic acids and proteins. The TWIK-6, TWIK-7, IC23927,

TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and
53763 ICF nucleic acids and proteins may be used for preventing,
c diagnosing and treating ICF-related diseases. The sequences may be used
to treat disorders associated with decreased expression by rectifying
mutations or deletions in a patient's genome that affect the activity of
ICF proteins by expressing inactive proteins or to supplement the
ICF proteins by expressing inactive proteins may also be used as
antigens in the production of ICF proteins. The proteins may also be
c antigens in the production of antibodies against ICF proteins and in
assays to identify modulators of ICF protein expression and activity. The
antigens in the production and activity. The antibodies may be used
c anti-ICF protein expression and activity. The antibodies may be used
c samples (e.g. by immunoassay). The nucleic acids and proteins may be used
to prevent, diagnose and treat a wide variety of disorders, e.g. cancers
and leukaemia, Alzheimer's disease, multiple
and leukaemia, Alzheimer's disease, multiple
c sclerosis, epilepsy, hepatic disorders and cardiovascular disorders.
c sequence represents cDNA encoding the human TWIK-9 protein of the
invention. Note: The sequence data for this patent is also available in
c electronic format from USPTO at seqdata.uspto.gov/sequence.tml.
                                                                                                                                                                                                                   nseq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

Polypeptides and polynucleotides of the potassium channel family, useful for identifying agonists/antagonists of therapeutic use and diagnosis and treatment of cancer, pulmonary, cardiovascular, inflammatory and renal disease.
                                                                                                                                                                                                   The present sequence encodes a human DKCN1 polypeptide. The polypeptide is a member of the potassium channel family. The DKCN1 polypeptides and polynucleotides are useful for treating diseases including cancer, pulmonary, cardiovascular, inflammatory or renal diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative disease including Alzheimer's, neurological disorders, migraine, epilepsy, sleep-related disorders, erectile dysfunction and alopecia. DKCN1 polynucleotides are useful as diagnostic reagents for detecting mutations in the associated gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GAGGAGATCCGGATCAAGGGGAAGTACAACATCAGCAGCGAGGAGGACTACCGGCAGCTGGAG

The present sequence encodes a human potassium channel protein, termed KCNB. KCNB is expressed in breast tissue. The KCNB polypeptides are useful for identifying a compound that modulates its activity. The KCNB polypeptide and nucleic acid are useful for detecting cancer cells in biological samples. The inhibitor of the potassium channel polypeptide is polypeptide is useful for inhibiting proliferation of a cancer cell and for treating a potassium channel-associated disorder. The KCNB nucleic acids, proteins, and/or antibodies are useful in the diagnosis or prognosis, or treatment of diseases are cancer, brain associated disorders (such as epilepsy, Alzheimer's disease, Parkinson's disease, stroke, multiple sclerosis, migraine), psychiatric disorders (such a depression, schizophrenia, bipolar diseases) and diseases related to the heart (such as and arrhythmias), diseases related to pancreas (such as pancreatitis and arrhythmias), diseases related to pancreas (such as pancreatitis and

                                                                                                                          8
                                                                                                                                                                                                        The invention relates to antisense oligonucleotides 10-50 bases in length targeted to rat or human TASK-3 mRNA (corresponding cDNAs shown in ADH34471-ADH34472). TASK-3 is an outwardly rectifying acid-sensitive optassium channel which is regulated by extracellular pH. It is mainly expressed in central nervous system tissue in regions implicated in nociception and chronic pain, indicating that it may have a role in pain ociception and chronic pain, indicating that it may have a role in pain sensation. The invention also relates to compositions comprising the antisense oligonucleotides; a nucleic acid construct and host cell comprising a regulatory element operably linked to a nucleic acid molecule that can be transcribed to form an antisense RNA; use of the antisense oligonucleotides in decreasing TASK-3 production; and a method of screening for compounds that modulate TASK-3 expression. The antisense coligonucleotides and compounds are useful for modulating pain, preferably from diabetic neuropathy, postherpetic neuralgia, fibromyalgia, surgery, or chronic back pain. The present sequence represents human TASK-3 cDNA.

The invention relates to human transporters and ion channels (TRICH) and the polynucleotides encoding them. The composition comprising TRICH or agonist of TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH or condition associated with overexpression of TRICH respectively. The composition comprising Ab is useful for diagnosing a condition of disease associated with expression of TRICH in a subject, where the disorders include a transport disorder such as akinesia, cystic fibrosis, diabetes mellitus, parkinson's disease, myasthenia gravis, cardiac disorders associated with transport e.g. Alzheimer's disease, Wilson's disease, cansociated with transport e.g. Alzheimer's disease, Wilson's disease, colire, addison's disease, Huntington's disease, dementia, multiple sclerosis, bacterial and viral meningitis. TRICH DNA is useful for generating a transcript image of a tissue or cell type, which represents the global pattern of gene expression by a particular tissue or cell type. TRICH DNA is used in gene therapy. The present sequence is human TRICHS CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rological

The invention relates to human tandem of P domains in a weak inward
rectifying potassium channel polypeptides (TWIK-9) termed 56115 and
nucleic acid molecules encoding such polypeptides. Sequences of the
invention are useful for treating TWIK-9-associated or related disorders
such as central nervous system disorders (e.g. Alzheimer's disease,
c e.g., hypertension, sleep disorders, neuropsychiatric disorders (e.g.
depression, schizophrenia), learning or memory disorders (e.g. amnesia),
bipolar affective disorders, cardiac-related disorders (e.g. amnesia),
c arteriosclerosis, myocardial infarction), pain disorders (e.g.
arteriosclerosis, differentiation or migration disorders (e.g.
c cancer) and disorders of tissues in which TWIK-9 protein is predominantly
expressed. They are also useful in screening assays, detection assays
c expressed. Ge.g., diagnostic assays, prognostic assays, monitoring clinical
trials and pharmacogenomics) and in methods of treatment (e.g.
therapeutic and prophylactic). TWIK-9 polynucleotides are used in gene
therapy. The present sequence is human TWIK-9 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PhevalserCysileSerThrLeuCysileGlyAlaAlaAlaPheSerTyrTyrGluArg

The invention relates to TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ion channel family (ICF) nucleic acids and proteins. The TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ICF nucleic acids and proteins may be used for preventing, diagnosing and treating ICF-related diseases. The sequences may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of ICF proteins by expressing inactive proteins or to supplement the ICF proteins of ICF proteins. The proteins may also be used as antigens in the production of antibodies against ICF proteins and in assays to identify modulators of ICF protein expression and activity. The antibodies as diagnostic agents for detecting the presence of ICF proteins in samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple and leukaemia, appliepsy, hepatic disorders and cardiovascular disorders. This sequence represents cDNA encoding the human TWIK-9 protein of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha2delta-4, 54414, or 53763 nucleic acids and proteins, useful for preventing, diagnosing and treating e.g. cancers, Alzheimer's disease cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1262

The polypeptide a member of the potassium channel family. The DKCN1 polypeptides and polynucleotides are useful for treating diseases including cancer, pulmonary, cardiovascular, inflammatory or renal diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative disease including Alzheimer's, neurological disorder migraine, epilepsy, sleep-related disorders, erectile dysfunction and alopecia. DKCN1 polynucleotides are useful as diagnostic reagents for detecting mutations in the associated gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             U; 1 Other;

The present sequence encodes a human potassium channel protein, termed KCNB. KCNB is expressed in breast tissue. The KCNB polypeptides are useful for identifying a compound that modulates its activity. The KCNB polypeptide and nucleic acid are useful for detecting cancer cells in biological samples. The inhibitor of the potassium channel polypeptide is cuseful for inhibiting proliferation of a cancer cell and for treating a potassium channel-associated disorder. The KCNB nucleic acids, proteins, of diseases are useful in the diagnosis or prognosis, or treatment of diseases are cancer, brain associated disorders (such as epilepsy, Alzheimer's disease, Parkinson's disease, stroke, multiple sclerosis, migraine), psychiatric disorders (such a depression, schizophrenia, bipolar diseases) and diseases related to the heart (such as pancrearite...)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; potassium channel protein; KCNB; breast tissue; cancer; stroke; potassium channel-associated disorder; brain associated disorder; epilepsy; Alzheimer's disease; Parkinson's disease; multiple sclerosis; migraine; psychiatric disorder; depression; schizophrenia; diabetes; bipolar disease; heart disease; arrhythmia; pancreas disease;

```
his invention describes novel cytostatic polynucleotide and polypeptide equences which can be used in a method for diagnosing prostatic cancer. It is based on the risk of developing prostatic cancer. Diagnosis is based on etermining over transcription or over expression of the sequences in rostatic tissue. Screening for inhibitors of the sequences or detection ubstances involves a binding assay, any compounds that bind are elected, optionally after deconvolution of mixtures. Detection of a redetermined minimum level of the reporter indicates the presence of umour cells. Inhibitors can be chosen from antisense oligonucleotides, hort-interfering RNA or ribozymes; an organic molecule of molecular eight below 5000, preferably 300, that binds to the polypeptide; an organic the polypeptide; a (monoclonal) antibody (Ab) against the olypeptide, preferably humanised or human; an anti-idiotype, non-human monoclonal) antibody directed against Ab or any of the above derivatised
                                                                                                                                                                                                                                          1123
                                                                                                                                                                                           392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ŧ,

radioisotope. The polynucleotides are identified in human prostatic radioisotope. The polynucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the polynucleotide and polypeptide sequences used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention

against the non-human derivatised and/or immunostimulace are identified in human pressions, analysis, using DNA microarrays, analysis, using bNA microarrays, analysis, using boxed that ancer samples showed that This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; a (monoclonal) antibody directed against Ab or any of the above derivatise (monoclonal) antibody directed against Ab or any of the above derivatise with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polynucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the polynucleotide and polypeptide sequences used in the method of the olypeptide ic cancer | on of a sence of sleotides, ecular the sequences in quences or detecti
